## DETAILED ACTION

### *Election/Restrictions*

1. Claims 6-9 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on December 27, 2006.
2. Applicants' amendment filed June 21, 2007 presents claims to a plurality of species where only a genus was originally claimed, therefore an election of species requirement follows (see MPEP 818.02(b) and 1893.03(d)).
3. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

1) a reinforcement material for rubber having a flat coil shape wherein between adjacent circular loop portions the reformed portion has a curvature smaller than that of the circular loop portions; and

2) a reinforcement material for rubber having a flat coil shape wherein between adjacent circular loop portions the reformed portion is almost linear (see the specification paragraph 0013).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Art Unit: 1733

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. The claims are deemed to correspond to the species listed above in the following manner:

1) claims 1 and 3-5;

2) claims 10-15.

The following claim(s) are generic: none.

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the subject matter common to both species (including reformed portion having curvature different than that of the loop portions + loop portions being circular) does not distinguish over the prior art as evidenced by JP 63-96338 A (see paragraph 6 of the Office action mailed March 16, 2007: loop with single radius of curvature R (abstract, Figure 2) is by definition circular) or JP 10-258609 A (see paragraph 6 of the Office action mailed March 16, 2007: loops may be circular (translation paragraph 0009)) or JP 11-21777 A (see paragraph 6 of the Office action mailed March 16, 2007: loops may be circular (translation paragraph 0009)) or Adams (see paragraph 7 of the Office action mailed March 16, 2007: loops may be semi-circular (resulting in circular loop “portions” separated by straight portions, p. 2 lines 16-21)) for example, therefore this common subject matter cannot serve as a common special technical feature.

6. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 1733

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
